

Bribie Island flood mitigation study

Project update

October 2025

Have your say on flood mitigation options for Woorim

Thank you to everyone who previously shared their flood stories via the Your Say website and pop-up events to help guide this project and future investigations.

Feedback from the community was considered and used to assist in identifying flooding and drainage issues.

We have used this information to help identify improvements to the drainage system that we believe will reduce the severity and frequency of flooding on this community.

The drainage improvement options currently being investigated are shown on the maps on the back of this flyer. The final option may be formed from a combination of individual mitigation improvements from either option.

Your feedback on these options will help us consider the right decisions to reduce flood risks in your area.
